Specialist Flexible Packaging

VCI Bags

We supply a wide range of VCI materials and VCI bags. VCI bags are used to wrap metal objects to prevent rusting whilst in transit.

VCI Bags are very useful for packing multiple metal objects into one box or even just wrapping a single item. They are very easy to use, you can tie them once filled, fold over the end and tape it closed, or have your bag manufactured with a grip seal to simplify the closing process. We can print bags with your own design, giving them a unique look.

It may be beneficial for you to use a VCI bag instead of VCI polythene, it takes less time to pack an object into a bag so this could increase the efficiency of your packing process and make your package more air tight. If not packed correctly the VCI bag will become useless and the VCI will not perform like it is designed to.

For packing advice or product data sheets, please get in touch and we will be glad to help.
